HANDY SUDOKU

Sudoku is the best fun your brain can have! The basic rules are simple. In any Sudoku puzzle each row, column and smaller 3 x 3 box of nine squares must contain the numbers 1-9 with none of the numbers repeated in any row, column or 3 x 3 block.
Use your logic skills to unravel the puzzles. Work your way through the levels and enjoy all the variants such as the X-Factor, Killer Sudoku and Binary puzzles.
Full instructions see p74

We love to hear from our puzzlers:

Kathleen, Patrick, Christine, James and Dominic Lovatt

Christine's promise...

When James and I started making crosswords together, we would never have guessed that 40 years later our three children, Patrick, Dominic and Kathleen, would share our love of words and word puzzles.

All five of us work here at Lovatts alongside our clever team of wordsmiths, bringing puzzles to you, our wider family of puzzlers. We take pride in each puzzle we create and strive to produce error-free, enjoyable puzzling every time. We believe that what we do is the best, and we are always working to make it better.

killer sudoku

The Killer Sudoku (also called Addoku) is like a Sudoku in that every row, column and 3 x 3 block must contain 1 – 9. The difference is that no digits are filled in to start you off.

The digits in the cells linked by a shaded line (a set) add up to a total, which is shown on the grid. Use these given totals to find the right digits for each set. No digit may appear twice in a set.

Killer Sudoku Tips

Single digits can be filled in straight away. Then look to two digit sets and work out the possible combinations. For example, the total 3 can only be 1 & 2, 17 can only be 9 & 8 but 8 could be 1 & 7, 2 & 6, or 3 & 5. Then do the same with three and four digit sets.

It is also useful to remember that the digits in each row, column and 3 x 3 block add up to 45. For example, if eight digits in a row must add up to 38 then the final digit is 7. As a rule, if the shaded sets filling a 3 x 3 block have just one digit protruding into another block, then that digit must be the total of those sets minus 45.

Always remember your basic Sudoku rule that no digit can be repeated in any row, column or block and you will soon unravel our Killer Sudoku.

HEXOKU

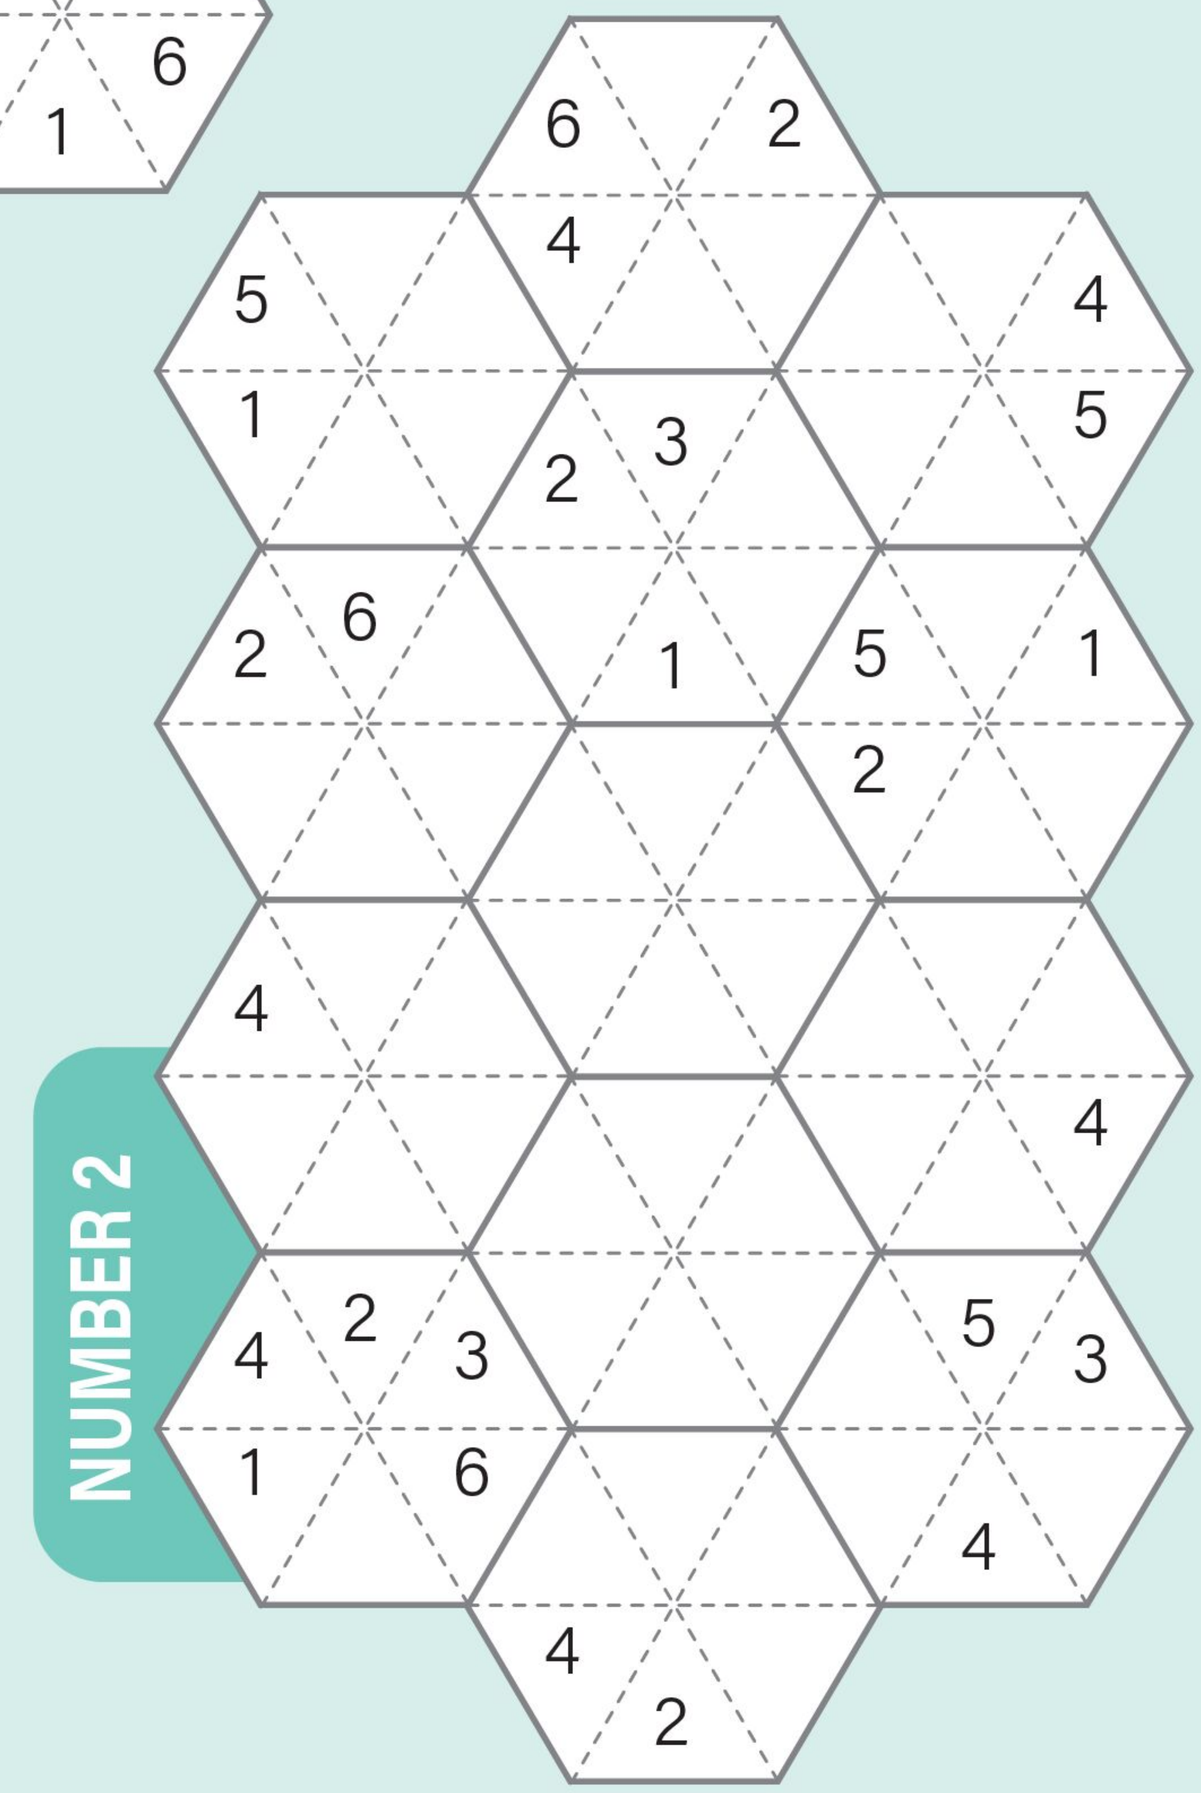

NUMBER 1

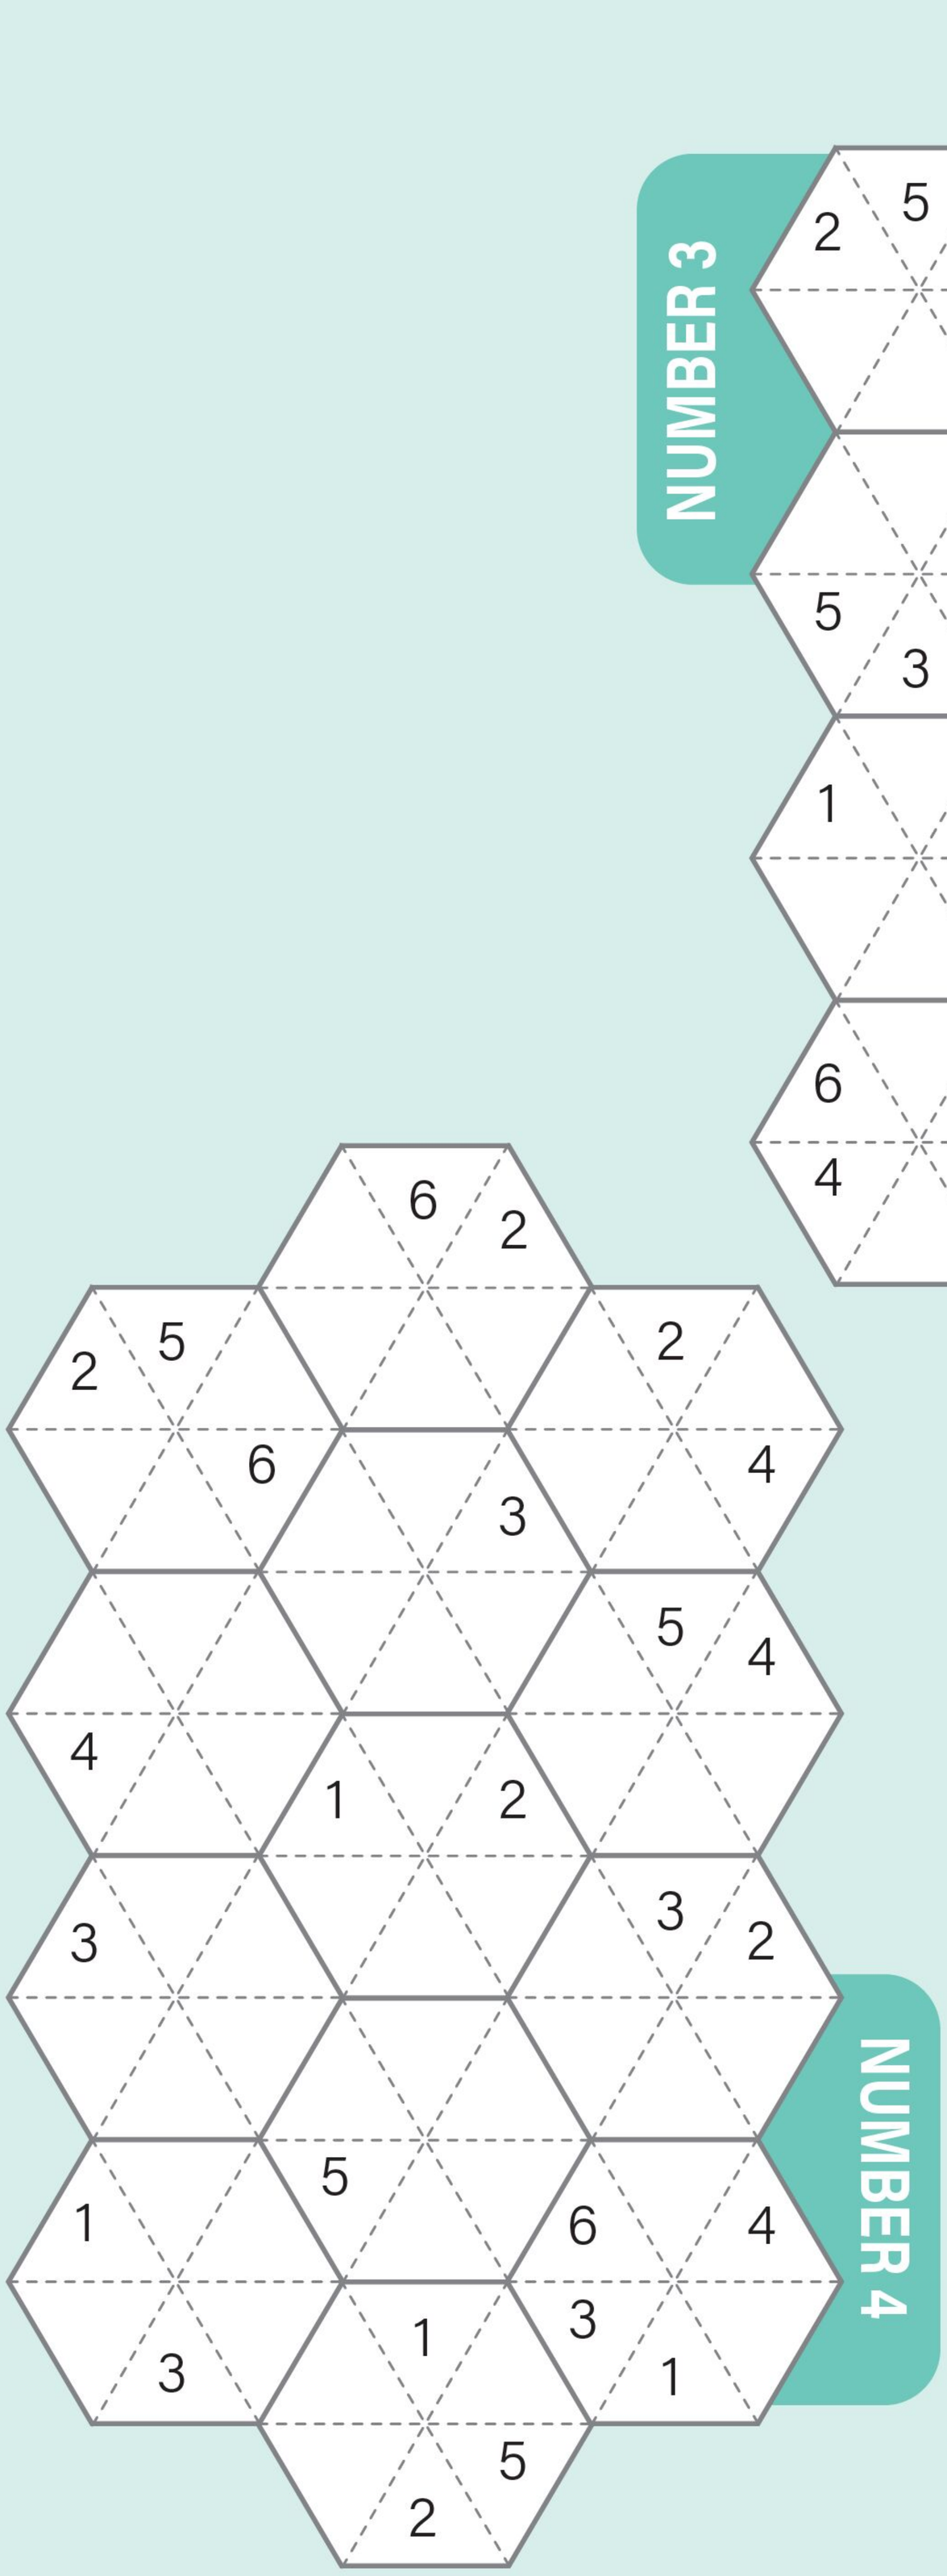

Fit the numbers 1 to 6 into each hexagon so that where the hexagons touch, the numbers are the same.

No number is repeated in any hexagon.

HOW TO DO SUDOKU

A Sudoku puzzle consists of 81 squares divided into nine 3 x 3 blocks. Some of the squares have given numbers.

To solve a Sudoku puzzle you have to use the numbers 1-9 to fill in the blank spaces so that each row, each column and each 3 x 3 block has all the numbers 1-9 appearing once.

The only thing you need to solve a Sudoku number place puzzle is logic. You don't need any mathematical knowledge.

In the easier puzzles you may be able to see straight away where a particular number goes.

Focusing on one blank square at a time, scan its row, column & block. Any numbers that already appear cannot be used to fill this blank square.

As you eliminate possibilities you can see which numbers can be used. If only one number in any sequence is missing (to make the numbers 1-9 appear once only across, down or in a block), then this is the number you are looking for, so fill it into the space.

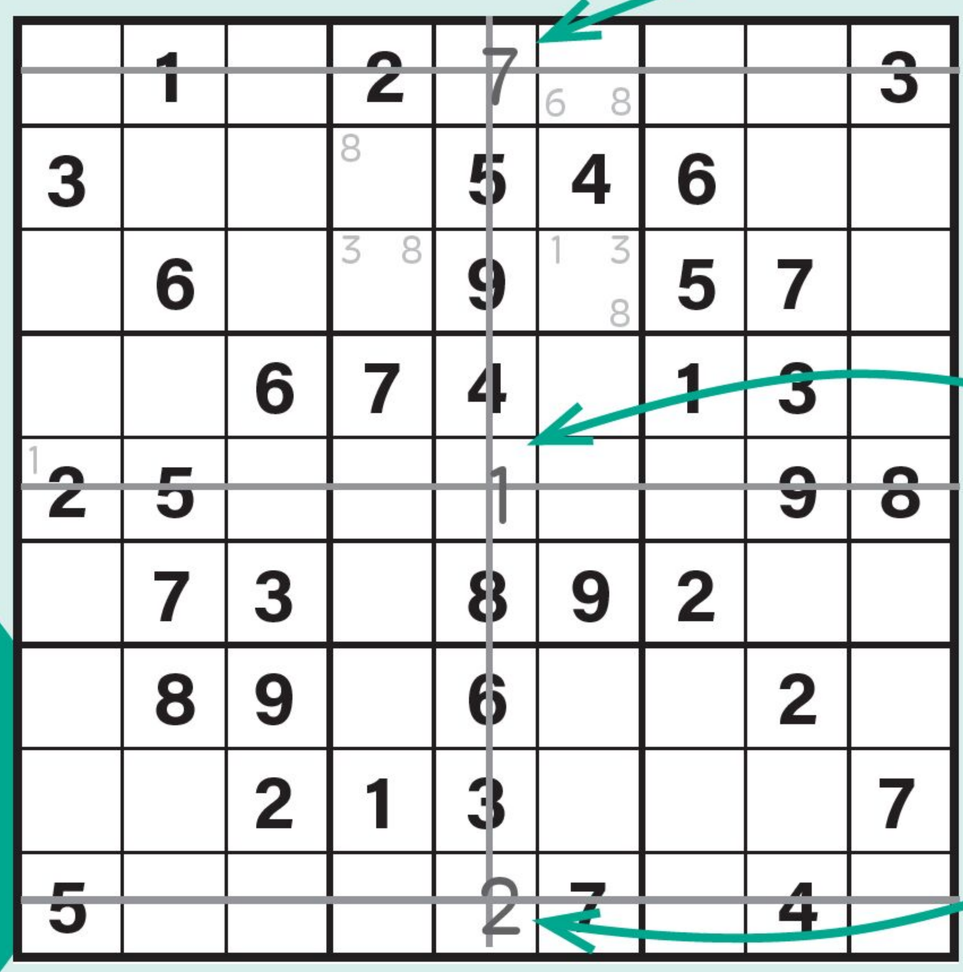

Scanning the sudoku for pairs of numbers in rows, columns and blocks is a great way to see where a number is missing.

In the harder puzzles (or when first tackling sudokus) you can make note of the possible numbers lightly in pencil in the corner of each box.

If you do this in all the blank squares you will soon see a place where a particular number has to be the answer.

As you fill in the numbers you eliminate the possibilities available to fill in other spaces. Continue filling the numbers until every square is filled and the columns, rows and 3 x 3 blocks all contain the numbers 1-9.

Write the possible number options lightly into each square and soon you will be able to eliminate certain numbers.

If you scan the row, column and 3 x 3 block you will see that the only digit that can be used to fill this space is 7.

If you repeat step 1 you will see this square can only be filled by 1.

This must be 2 and so your column is now complete.

Sudoku puzzles can take anything from 10 minutes to a few hours. The more you do the better you become!

Our more difficult Sudokus may require more complex solving techniques. Examples can be found at https://lovattspuzzles.com/sudoku-solving/
